

Suppose that you have 3 shirts and two pairs of pants. How many outfits can you make?

6 outfits
 3×2

Fundamental Counting Principle – If an event occurs in m ways and a second event occurs in n ways, then the two events occur in $m \times n$ ways.

- 1) An ice cream store offers 3 types of cones and 31 flavors. How many single scoop cones can be made?

$$3 \times 31 = 93$$

- 2) In a certain state automobile license plates display 3 letters followed by 3 digits.

- a. How many license plates are possible if repetition of letters and digits is allowed?

$$\frac{26}{L} \times \frac{26}{L} \times \frac{26}{L} \times \frac{10}{\#} \times \frac{10}{\#} \times \frac{10}{\#} = 17,576,000$$

- b. How many license plates are possible if repetitions of letters is not allowed but repetition of digits is allowed?

$$\frac{26}{L} \times \frac{25}{L} \times \frac{24}{L} \times \frac{10}{\#} \times \frac{10}{\#} \times \frac{10}{\#} = 15,600,000$$

- 3) In how many ways can a race with 6 runners be completed?

$$\underline{6} \times \underline{5} \times \underline{4} \times \underline{3} \times \underline{2} \times \underline{1} = 720$$
